Aptitudes principales

Cross-Team Enablement

CI/CD Quality Integration

Risk-Based Testing

Languages

French (Elementary)

Alemán (Limited Working)

Inglés (Full Professional)

Ruso (Limited Working)

Certifications

Curso de Análisis de Negocios para Ciencia de Datos

Curso de Introducción a la Terminal y Línea de Comandos

Introduction to Cyber Attacks

Curso de Introducción al Pensamiento Computacional con Python

Felipe Bustos Ponce

Quality Engineering Lead | Test Architecture & Governance | Scalable Automation Systems | Risk-Driven Quality Strategy

Chile

Extracto

I design scalable quality systems that enable engineering organizations to grow without increasing operational risk.

With 10+ years of experience in software quality engineering across multinational environments, I specialize in building test architectures, governance frameworks, and automation strategies that ensure long-term maintainability and distributed ownership.

My work focuses on:

- Test architecture design and standardization
- Automation platform scalability
- Governance models for distributed teams
- Risk-driven quality strategy
- Cross-functional alignment with Engineering leadership

Currently, I lead the standardization of AIO testing practices to establish clear ownership, reduce maintenance overhead, and improve structural consistency across teams. What began as a management-level initiative is now operationally driven by QA, with increasing cross-team adoption.

I collaborate with Engineering Managers to align quality engineering practices with scalability, system resilience, and operational continuity.

My professional focus is evolving from senior execution to technical authority in quality architecture — designing systems that scale with product and organizational complexity.

Experiencia

ZeroFox

Senior QA Automation Engineer

agosto de 2023 - Present (2 años 8 meses)

Gran Santiago, Región Metropolitana de Santiago, Chile

Design and evolve Quality Engineering strategy across multiple security-focused platforms, integrating automation frameworks and risk-based validation into CI/CD pipelines.

Collaborate with Engineering Managers to align test governance standards with release objectives and risk mitigation strategies.

Architect backend and frontend test systems to increase coverage, reduce regression risk and improve release confidence across distributed teams.

Lead shift-left initiatives by embedding quality gates and automated validation earlier in the development lifecycle, reducing potential production defects.

Develop internal testing tools and AI-assisted validation workflows to improve defect detection speed and overall QA efficiency.

Promote organizational quality mindset through cross-team collaboration, influencing engineering standards and release reliability.

Lead the standardization initiative for AIO test management, defining governance models and shared ownership practices to ensure long-term maintainability and cross-team scalability of automated test assets.

Reduced knowledge silos and single-point-of-failure risk by enabling distributed test ownership across engineering teams.

Falabella

QA Automation Engineer

abril de 2023 - agosto de 2023 (5 meses)

Chile

Evernote

SDET(Software Development Engineer in Test)

octubre de 2021 - abril de 2023 (1 año 7 meses)

Región Metropolitana de Santiago, Chile

Led quality strategy for Editor and Calendar features, defining release validation criteria and ensuring biweekly production deployments met reliability standards.

Reduced backlog of open defects from 200 to 40 within three months by restructuring validation workflows and prioritizing high-risk areas.

Increased automated coverage by 50% through development of integrated test suites for UI and backend components.

Strengthened release confidence by aligning test planning, execution and automation with product roadmap and delivery cadence.

Contributed to production launches of key features including Single Click Share and MS 365 Calendar Integration under controlled risk validation.

Synopsys Inc

Quality Assurance Engineer

junio de 2016 - abril de 2021 (4 años 11 meses)

Vitacura, Región Metropolitana de Santiago, Chile

Led QA initiatives for enterprise-level products, coordinating validation efforts across global teams and improving cross-region quality standards.

Managed performance testing suites and reliability validation processes for critical systems, strengthening product stability.

Mentored new engineers and contributed to global QA standardization initiatives to unify testing practices across distributed teams.

Actively participated in international summits to align quality strategy, engineering processes and product evolution.

Drove process improvements that enhanced defect detection efficiency and reinforced engineering governance practices.

Equifax

Application Developer

abril de 2013 - febrero de 2016 (2 años 11 meses)

Santiago de Chile

Application developer in Core Software Engineering Group (CSE), responsible for product design, developing, testing and continuous integration for EFX International, mostly focused in UK, Canada and Chile.

Experience working under technologies as JavaEE, JSF, Oracle, Groovy, etc. And also skills as direct client negotiation, work estimation and scheduling, evaluation of fatibility, team work, management and coordination with teams abroad, etc.

Advanced english, native spanish, basic german and notions in canadian french.

Universidad de Santiago de Chile

Ayudante de Bases de datos vespertino

agosto de 2011 - julio de 2013 (2 años)

Assistant teacher of the course of "Database Fundamentals", which consisted in theoretical and practical classes to introduce the students to the notions of databases, relational and non relational databases, DB engines, SQL queries, and different techniques to improve performance. The course ended with a final project with consisted in a web application to administrate a small harbor in different aspects (logistics, transport, storage of cargo, etc), where every team had to work had to work collaboratively. The average approval rate of this course went up to 100%.

I. M. Peñalolén

Desarrollo Proyecto Ingeniería de Software

julio de 2011 - diciembre de 2011 (6 meses)

Municipalidad de Peñalolén

Design and implementation of a public and private agenda for the Finances Department of the Municipality, which was delivered successfully. Even though that semester had a lot of complications (see protests in Chile in 2011).

The customer appreciated the work and the team could approve the course with an outstanding qualification.

Universidad de Santiago de Chile

Ayudante del curso Fundamentos de Programación

julio de 2010 - diciembre de 2010 (6 meses)

Assistant teacher for the first course of computer science to the freshmen students of the Computer Engineering career. Developed theory and practice classes and evaluate the performance of the students. Studied notions of programming, problem solving, Python and C language and concluding with a final project which consisted in a software to different purposes, which varied

depending on the semester. The level of approval of the course increased a 60% when I worked as assistant teacher.
